T. Alexander Campbell

tarikalex2003@gmail.com Orlando, FL LinkedIn https://masterofbanks.github.io/

Skills

Unity, C#, Unreal Engine 5, Blueprinting, C++, Python, Javascript, SQL, Perforce, UI/UX Design, Tools Design , Rapid Prototype Production

Experience

Technical Designer, *Studio Kismet* 10/2025 – Present | Orlando, FL

- Developed a **hoverboard skating game, Everent,** in **Unreal Engine 5** with a multi-disciplinary team of 23 people
- Implemented **diegetic UI elements** (Pause Menus, Narrative Journals, Interaction Prompts) in collaboration with UI artists to better immerse players within the narrative and world
- Designed and built a **3D Compass System** to help players **navigate** to POIs within the large open world
- Implemented **Full Controller Remapping**, enhancing player customization and accessibility
- Built a **2D Heatmapping tool** that provided player position data, enabling data-driven level design improvements

Project Lead, *TMRW Sports* 01/2026 – 05/2026 | Orlando, FL

- Led a **cross-functional development** team to develop **simulation prototypes** for an NDA Project
- Coordinated **design brainstorms** to create new ideas for sports simulation software
- Organized and **distributed tasks** for the team via **Jira**

Projects

Drift or Die! 02/2026 – Present

- 3D racing game made using **Unreal Engine 5** where the player has to drift their car to prevent it from exploding
- Scripted an intuitive **Car Controller** using custom Ray-traced Suspension Physics System
- Utilized **UE5 Blueprints** to implement the Car Controller, Environmental Bombs, and UI

Cozy Cat Cafe 04/2026 – Present

- Solo-Developed a **2D Restaurant Management Simulator** where the player controls the front a French Cat Cafe
- Ideated and Programmed 3 Cooking **UI Minigames** to direct players through making different customer orders
- Designed and Scripted a **Finite State Machine** to control **AI** customer ordering, walking, and waiting for food

Adult Driver 01/2026 – Present

- 3D Car-Combat game made using **Unity** where the player has to destroy enemy helicopters to escape a city
- Designed and programmed using **C#** a **Car Player Controller** with different player abilities for stealth and combat playstyles
- Devised a **smart enemy AI** system that can track the player in packs when alerted to a disturbance

Soccer Wordle 05/2025 – 08/2025

- **Full-stack web app game** where you guess soccer players instead of words
- Built a **python** webscraper to scrape soccer player data from FBref.com
- Designed and implemented a **SQL** database using **PostgreSQL** to store 4000 soccer players' information
- Created a **RESTful API** using **Node.js** and **Express** to get player data to the frontend
- Designed **frontend** with a responsive player search bar and easy to understand **UI using Unity and C#**

Education

Interactive Entertainment M.S, *FIEA @ University of Central Florida*

Physics B.S, *University of Florida*
